

## Formatting a drive in FAT32

Large capacity drives can be used with the UPL, however they must be formatted in FAT32. Windows does not allow formatting a drive larger than 32GB in FAT32. Rufus (<https://rufus.ie/>) can be used:

- Click on “Show advanced drive properties” and check “List USB Hard Drives”
- Select “Non bootable” in the Boot selection drop-down menu
- Select Partition scheme “MBR”
- Enter a volume label (first four digits will be used to identify drives in the UPL)
- Select “Large FAT32” as a file system
